

THE OFFERING

IMAGERY & CORN NITROGEN SCRIPT

Deveron UAS Corp., through its subsidiary and a leading agriculture data analytics provider, Veritas Farm Management Inc., have combined forces to provide clients across North America a new tool to help manage their in-season corn nitrogen application.

HOW DOES IT WORK?

You will receive one data collection through UAV or Drone (remote sensing), plus a Nitrogen Script which will automatically distribute your nitrogen more efficiently, reducing the amount where it is not needed and increasing it where it is. The net result will be either a decrease in overall nitrogen used, or an increased in yield potential. In addition, you will receive a post-season analysis on the scripting effectiveness.

- We will collect a layer of *Plant Health Assessment* or in-season UAV imagery to show relative plant health
- The imagery is a real-time, high resolution data layer, which can be imported into any precision ag software

- We will create a nitrogen application script based on the information provided in your order

- You will receive a *Variable Zone Spray Script* and *Field Health Report*, along with the raw data layers, which you may use towards decisions on future crop rotations

- Once the crop has been harvested, you will also receive an additional feature, validating the decision process through a full statistical analysis
- Yield data is required for this portion of the program, but available at no cost to you

WHAT ELSE CAN I USE THE DATA FOR?

In-season imagery can be used for:

- Targeted scouting
- Scripting for in-season nutrient and crop protection applications
- Water management

Zones created can be used for:

- Seeding rate prescriptions for the following year
- Best Management's Practices, 4R Nutrient Management and soil remediation

HOW MUCH DOES IT COST?

The all-in pricing for a package that includes the UAV data collection and a Nitrogen Script, plus a post-season statistical analysis is only **\$4.49 per acre**.

You get both a complete, more accurate application for your nutrient program and an extra data layer, which can be used to further enhance your precision agriculture programs today and in the future.

* Prices subject to change, based on 100-acre minimum.

3 EASY STEPS TO ORDER:

1

Log into our order management platform at soar.deveronuas.com and create an account or use your existing login credentials.

2

Click  to import (or create) your field boundary.

3

Click  and complete the information. Choose **Corn Nitrogen Script** as the reason for your order. Based on the crop type and estimated plant date, we will determine the most beneficial data collection protocols.

You are done! Our pilots will collect the data and the final product will be available through your SOAR account.

In-Season Imagery

Nitrogen Script

Target Rate (Liquid)	
(gal(US)/ac)	
	25.00(0.331 ac)
	20.00(6.435 ac)
	15.00(9.117 ac)
	10.00(2.707 ac)
	5.00(0.480 ac)
	0.00(0.327 ac)

Estimated turnaround time from data capture to deliverable is **48 hours**.

Having trouble?
